

Primary Objective

Help overloaded undergraduates quickly and confidently identify which assignments are actually due next, reducing uncertainty and deadline-related stress.

KR1- Reduce the average time students spend scanning calendars and assignment lists to determine their next assignment by 40%.

Type: Leading indicator

KR2 — Increase the percentage of students who report feeling confident they know what is due next from 45% to 80%.

Type: Leading indicator

KR3 — Decrease the rate of assignments started within 24 hours of the deadline across multiple courses by 30%.

Type: Lagging indicator

KR4 — Reduce self-reported stress related to managing deadlines by 25% as decisions around due assignments improves.

Type: Lagging indicator

Critic

Assumptions These Metrics Rely On

1. **Time spent deciding what to work on correlates with confusion**, not procrastination.
2. **Self-reported confidence and stress accurately reflect user experience**, even though they're subjective.
3. **Starting assignments earlier implies better clarity**, not just easier coursework that week.
4. Students are **aware enough of their own stress and habits** to report them reliably.
